Patent No. 6500938
GENERAL INPORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Sellhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:

assays, identifying modulators of kinase activity or treating disorders characterized by absence or unwanted expression of the protein.

Claim 4; Fig 1; 81pp; English

The invention relates to isolated human kinase proteins and nucleic acids. The nucleic acid and peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The nucleic acids are useful as probes or primers, in constructing recombinant vectors, for expressing antigenic portions of the proteins, chromosome mapping, drug screening, testing an individual for a genotype, and for gene therapy in patients containing cells that are aberrant in kinase gene expression. The proteins may be used in drug screening assays, in the identification of compounds that canalysis, in treating disorders characterised by an absence or unwanted expression of the protein (bone osteosarcoma, or colon-moderately expression of the protein (bone osteosarcoma, or colon-moderately in vitro, or in cell lysate or supernatant, to isolate and purify the in vitro, or in cell lysate or supernatant, to isolate and purify the protein function. The present squence is human protein cDNA. Human kinase protein gene is located on chromosome 5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences for hu cell cycle regulating protein 53. The sequences can be used in the diagnosis and treatment of malignant tumours, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various types of inflammation. The present sequence is the cell cycle regulating protein 53 coding sequence

Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense composition for treating hypprpoliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated CDNA included in the figures but not mentioned anywhere else in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides human protein kinase molecules (HPKM) (AAY27052-57) and nucleic acid sequences (AAX89850-55) encoding the HPKM polypeptides can be produced recombinantly by standard recombinant methodology. Protein kinases add phosphate groups to proteins. HPKM polypeptide or an HPKM antagonist is used to treat or prevent cancer or an immune disorder. The present sequence represents the nucleotide sequence of HPKM-3

Van Lookeren M, Williams PM, Wood WI; Schoenfeld J, Clark H, W ID;

WPI; 2004-419628/39. P-PSDB; ADP24394 New PRO polypeptides and polynuclectides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral nervous system.

Claim 1; SEQ ID NO 1571; 2940pp; English

idiopathic inflammatory myopathy. Siggren's syndrome, systemic curetors, an idiopathic inflammatory myopathy. Siggren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopatha, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polymeuropathy, dullain-Barre syndrome, a chronic inflammatory demyelinating polymeuropathy, a hepathis, primary infectious or autoimmune chronic active hepathis, primary biliary cirrhosis, granulomatous hepathis, solerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, asthma, allergic rhinitis, atopic dermathis, food hypersensitivity, urticaria, an immunologic disease of the lung; cosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary consulpathic pneumonia, idiopathic pulmonary consulpathic pneumonia, idiopathic pulmonary consulpathic pneumonia, idiopathic pneumonia, graft rejection or graft-versus-host disease. The present sequence encodes a PRO protein of The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antiinheumatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antipsoriatic, antidialergic, antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile, chronic arthritis, a spondyloarthropathy, systemic sclerosis, an

FATTAGE 2

```
The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant expressing the protein is useful for producing a pharmaceutical composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as allergic diseases, inflection, autoimmune diseases, diabetes, hyperalpidaemia, infections disease and cancers. Compositions are useful for treating disease associated with STAT6 activation and/or prevention for treating diseases. Compositions are also useful in rheumatoid arthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, allergic rhinitis, ischaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STAT6 compounds for treating and preventing disease associated with excessive compounds for treating and prevent alseases associated with excessive compounds for treating and prevent assessed expresents a persent sequence represents a persent events.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          161 GTCATTATTTAGAAGCAAGGTCCTTGAATGAGCGAGATTATCGGGACCGGAGATACGTTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ligand of beacon protein useful for treating obesity, anorexia, energy imbalance, diabetes, metabolic syndrome, dyslipidemia, hypertension and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention is related to the isolation of a ligand known as beacon from the Israeli sand rat. Beacon is associated with the regulation of energy balance, and the protein, its coding sequence and analogues can be used in the treatment of diabetes, obesity, anorexia, energy imbalance, metabolic syndrome, dyslipidaemia, hypertension and insulin resistance. In addition, they can be used in agriculture to produce leaner animals

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene calative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell number or size in the subject comprises an antisense of igonomoleotide. The subject comprises a mammal, preferably a human. The colypeptide to the agent, detecting binding of the agent to the colypeptide to the agent, detecting binding of the agent to the colypeptide or a change in an activity of the polypeptide, treating a subject comprises an antibody, A method of regulating fat cell number or size comprises an antibody, A method of regulating fat cell number or size comprises providing a subject containing the subject containing the subject or number contained as useful for identifying containing the subject containing the subject or number or size in the expression of a gene, and treating the subject containing the subject containing the subject containing and an account of a gene, and treating the subject containing the subject contains the 
                                    or size for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
            influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents human cDNA used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                   number; fat cell size; obesity; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1446 BP; 474 A; 258 C; 332 G; 382 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as allergic diseases, inflammation, autoimmune diseases, diabetes, inflammation, autoimmune diseases, diabetes, inflammations disease and cancers. Compositions are useful for treating disease associated with STAT6 activation and/or prevention of Thl hyperactive diseases. Compositions are also useful in rheumatoid arthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, allergic rhinitis, ischaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STAT6 activity. The protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive activation or inhibition of STAT6. The present sequence represents a human cDNA encoding a protein which promotes STAT6 activation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to the isolation of genes AAC59277-C59325 encoding 49 human secreted proteins AAB33718-B33764. The genes can be used to generate fusion proteins by linking to the gene for the human isolated to generate fusion proteins by linking to the gene for the human cancer immunoglobulin G FC portion (SEQIDI) for increasing the stability of the fusion protein as compared to the human protein only. The genes and conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic candis, proteins, antibodies and (ant) agonists are useful in the clasmosts, proteins, antibodies and (ant) agonists are useful in the clasmosts, and other cancers of the adrenal gland, bone, bone in marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addision's disease, allergies, autoimmune haemolytic ansemnia, autoimmune thyroiditis, dispetes mellitus, Crohn's disease, and the caractive colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               505

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cordetecting the altered expression of genes in an immunological cresponse. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comparising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected in a non-diseased sample, where an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comparing a plurality of polymuclectide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the diagnosis of an immunopathology, such as Crohn's disease, asthma, culcerative colitis, hypercosinophila, irritable bowel syndrome, osteoarthris, rheumatoid arrhritis or acute monocytic leukaemia, and in identifying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition of a subpopulation of a mixth composition of a my part of may also be used in drug discovery and development, toxicological and carcinogenic fragments. This sequence capresents a human cDNA of the invention. Note: The sequence data for this patent did not form part of the printined specification but was obtained in electronic format directly form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1171

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or succeptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant expressing the protein is useful for proteining a pharmaceutical composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as allowed the protein is useful for acneers. Compositions are useful for treating diseases. Inflammation, autoimmune disease, diabetes, hyperlipidaemia, inflammation, autoimmune disease, diabetes, byperlipidaemia, infections disease and cancers. Compositions are useful for treating disease associated with STAT6 activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid allergic thinitis, ischaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STAT6 compounds for treating and proventing disease associated with excessive the protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive the protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive the protein and all protein and all protein and proventing disease associated with excessive the protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive the protein and proventing disease associated with excessive the protein and proventing disease associated with excessive the protein and proventing states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         388

```

```
The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing a change in expression of the gene call the agent and identifying fat cell relative to expression of the gene in an expression vector not exposed to the agent, treating a subject. The agent and identifying fat cell number or size in the subject with the agent comprises an antisense of ilgonucleotide. The subject comprises an ammal, preferably a human. The oligonucleotide to the agent, detecting binding of the agent to the comprises providing a polypeptide and an agent, exposing the polypeptide to the agent, detecting binding of the agent to the agent and identifying fat cell number or size in the subject or a change in an activity of the polypeptide, treating a comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obselfy or diabetes. This sequence represents

The invention relates to isolated human kinase proteins and mucleic acid and peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic proteins and serve as targets for the development of human that express the kinase. The mucleic acids are useful as probes or primers, in constructing recombinant vectors, for expressing antigenic portions of the proteins, chromosome mapping, drug screening, testing an individual for a genotype, and for gene therapy in patients containing cells that are aberrant in kinase gene expression. The proteins may be used in drug screening assays, in the identification of compounds that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human kinase proteins and nucleic acids, useful in drug screening assays, identifying modulators of kinase activity or treating disorders characterized by absence or unwanted expression of the protein.
                                                                                                                                                                                                                                                                                    standard name= "Single nucleotide polymorphism" 3438. .13520

```
analysis, in treating disorders characterised by an absence or unwanted expression of the protein (bone osteosarcoma, or colon-moderately differentiated adenocarcinoma), and in generating antibodies specific for the peptides. Such antibodies can be used to detect the protein in situ, in vitro, or in cell lysate or supernatant, to isolate and purify the protein from host cells, pharmacogenomic analysis, tissue typing, and in inhibiting protein function. The present sequence is human kinase protein gene located on chromosome 5
modulate, stimulate or inhibit kinase activity, in pharmacogenomic
